

5.0: Proposals by Road

v 1.0 – 16/10/19

5.0.1 Overview:

Proposals are detailed on a Road-by-Road basis. This gives an overview of each road and the main issues faced, and the measures that could be implemented to mitigate them. Each measure is considered in turn, and in how they will work when combined with others.

Specific locations are proposed for each measure in order that works can then be progressed after any required approvals have been secured. There are clearly many common measures, and this will give motorists a consistent approach throughout the village, which in turn should increase compliance.

There is some intentional repetition amongst the sections, recognising that many residents will be primarily interested in the proposals for ‘their road’, and may not read all the other sections of this report. Each road ‘chapter’ can be extracted as a stand-alone document to give a brief overview – for example to accompany any consultations that are required.
